Regarding the norm EN ISO 20345, the minimum results for slip resistance to get the SRC certificate are :
SRA (flat) $\geq 0,32$
SRA (heel) $\geq 0,28$
SRB (flat) $\geq 0,18$
SRB (heel) $\geq 0,13$

Advantages = End users benefits

- **2,0-2,2mm thickness leather** for better resistance (to abrasion, tearing, perforation) and longer durability.
- **Three-dimensional textile** : micro-porous textile, soft and very breathable for better comfort.

SPORTY sole

- **Heel shock absorber and very thick sole at the heel for better comfort**
- **Non-slip structure** with a studded open for better drainage of fluids
- **Attack heel**, for a natural unfolding of the foot during walking and comfort while driving vehicle
- **Sportive design**
- **Sporty shape : injection of the PU sole under the foot, enables :**
 - ✓ Higher breathability of the foot
 - ✓ Adaptation of the leather to the shape of the foot
 - ✓ Flexibility of the sole
- **Cold insulation**
- **Dual density polyurethane (PU2D) injected**
- **Reinforcements of the PU sole at the front and the back of the shoe** for a better protection of the leather and the shoe

PARABOLIC® profile

- **Exceptional slip resistance** : the concave structure of the sole allows a progressive deformation of the sole in order to optimize grip.
- **Spring effect** : gives a more dynamic walk.
- **Walking assistance** : footprint adapts itself to the nature of the ground due to the profile of the sole which facilitates walking.
